

LEOPOLD KÖNIG

Leopold König is Co-Founder and President System Business of CUSTOMCELLS®. König studied industrial engineering at Stralsund University of Applied Sciences, majoring in mechanical engineering and business management. As early as 2011, the former paramedic and emergency medical technician pivoted his career towards electromobility by joining the development department for lithium polymer cells at Fraunhofer ISIT and founded CUSTOMCELLS® together with Torge Thönnessen the following year.

Leopold König is a specialist for application analyses and production technologies for battery cells. Previously, he collected several years of international professional experience in the context of corporate controlling, the digitalization of factories, and was involved in the new construction of a pharmaceutical production facility in China as well as the technical support of large-scale real estate projects. Due to his range of experience in different projects, he can now draw on an extensive, cross-industry network.
